1. **Identify the problem.** The first step in the problem-solving process is to identify the problem. This involves recognizing the issue, understanding its scope, and determining the goal of the solution.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

Wolfe

(b) *Example 2* (continued). The following table shows the results of the regression analysis for the dependent variable *turnover* in the *turnover* regression model. The results are presented in the same format as in the previous example.
